EDUCATION

Omdayal Group of Institutions, MAKAUT, West Bengal, India *7.67 (up to 7th Sem)*
Bachelor of Technology in Computer Science and Engineering , September. 2022 - present
Jyotkalyan Pusporani Vidyamandir, WBCHSE, Jyotkalyan, Howrah *80.2%*
Science (Class XII) Feb 2021 – April 2022
Amta Balika Vidyalaya, Amta, Howrah, West Bengal *76%*
Science (Class XII) Feb 2019 – April 2020

OBJECTIVE

A motivated and hardworking Computer Science and Engineering student seeking opportunities to apply my knowledge in software development, problem-solving, and emerging technologies.

RELEVANT COURSEWORK

Compiler Design, Object- Oriented Programming, Operating Systems, Database Management, Data Structures & Algorithms

TECHNICAL SKILLS

Programming Languages: *C, Java, Python, JavaScript*
Web Development: *HTML, CSS, JavaScript*
Database: *MySQL*
Tools & Technologies: *VS Code, Linux, Visual Studio, Git*

ACADEMIC PROJECT

- ***CALCULATOR:*** *A Simple Calculator using HTML, CSS and JAVASCRIPT*
- ***TIC TAC TOE:*** *A simple, fun game using JavaScript, CSS and HTML*
- ***WEATHER APP:*** *A Simple and Fun Weather app using JavaScript, CSS and HTML*
- ***TO-DO LIST WEB APP****: a simple and interactive to-do list web app to manage daily tasks.*
- ***Climb Craze – 2D Physics-Based Climbing Game***
  Technologies: Unity, C#, 2D Universal Render Pipeline (URP), Cinemachine
  Developed a 2D climbing game with realistic vehicle physics and terrain generation using Unity. Built core mechanics, including suspension, air rotation, fuel consumption, and collision-based game-over conditions. Used Perlin noise for procedural terrain and implemented a smooth camera system with Cinemachine. Integrated checkpoints, UI elements, and distance tracking for enhanced gameplay. Designed for future scalability, with planned features such as vehicle upgrades and gesture controls.
- ***ROBUST FACE RECOGNITION USING CNN***
  Technologies: Python, PyTorch, ResNet50, Sklearn, OpenCV, Jupyter Notebook. Built a ResNet50-based face recognition system trained on visually degraded images (blur, fog, rain, glare, low-light). Applied data augmentation and addressed class imbalance using weighted sampling and loss weighting. Designed a modular pipeline for robust prediction on distorted inputs.
- ***GENDER PREDICTION USING DEEP LEARNING***
  Technologies: Python, PyTorch, CNN, OpenCV, Jupyter Notebook
  Developed a CNN-based gender classification model using transfer learning (ResNet18). Enhanced

generalization with data augmentation (rotation, cropping, normalization). Achieved strong performance on unseen facial images.

ACADEMIC AND EXTRACURRICULAR ACHIEVEMENTS

- *SOLVE 200+ PROBLEMS ON **GEESKFORGEEKS***
- *SOLVED 200+ PROBLEMS ON **CODECHEF***
- *SOLVED 50+ PROBLEMS ON **LEETCODE***
- *"A SURVEY ON DEPRESSION DETECTION USING MACHINE LEARNING AND DAILY LIFE ACTIVITY TRACKING." Presented at the 4th International Conference on Computational Intelligence, Data Science, and Cloud Computing, 2025.*
- ***The Complete Full-Stack Web Development Bootcamp**: HTML, CSS, JavaScript, Node, React, PostgreSQL, Web3 and Dapps (Udemy course ongoing)*

SOFT SKILLS

- *Problem-Solving*
- *Teamwork & Collaboration*
- *Communication Skills*
- *Time Management*
